MONTIFF ALL-BASIC PLUS

DIRECTIONS

Take 1-4 Capsules T.I.D. 30 minutes before meals with a full glass of fruit juice or water. Do not take with milk or hot fluids. Vitamins and minerals are required for proper metabolism. Montiff Vita-Minz Plus and B-Complete or B-Long are recommended.

RECOMMENDED FOR:

- Periods of illness, injury, and stress when additional amino acids are required by the body for tissue and cell growth and repair.
- Helping to stimulate the immune system.
- Assisting in reversing negative nitrogen balance.
- Prior to and after surgical procedures.
- Providing a balanced nutritional program, especially for restricted food programs including food allergies. Contains no animal, milk or soy products.
- General health maintenance.

WHAT ARE AMINO ACIDS?

Amino acids are the building blocks of protein, and are vital to understanding the Krebs Cycle. They are individual crystalline molecules that make up protein,

similar to the way letters make up the alphabet. There are 20 basic amino acids that produce over 1600 substances in the body. They make up 3/4ths of the body's solid material, and are found in muscle tissue, organs, blood and skin. Amino acids also make hormones, enzymes, and vitamins, and are essential for a healthy immune system and proper neurological functions. It is necessary to replace amino acids constantly to nourish the body, and repair and

MONTIFF'S COMMITMENT TO QUALITY AND EXCELLENCE

Montiff Products are proudly manufactured in a GMP/NSF certified facility in the USA.

Each batch of our raw material undergoes extensive testing in order to ensure premium quality professional grade amino acids.

OUR EXPERTISE

*President and Founder **Don Tyson** was the first person to introduce oral amino acid application to the United States.*

Our employees have over 80 years of combined experience in the amino acid field.

Take comfort in knowing that when purchasing Montiff products, you are purchasing from the best.

***This product is not recommended for individuals with GERDS (Acid Reflux), please call if you need further assistance with this product.**

regenerate tissue. Amino acids are generally ingested in the food we eat, however, because of processed foods, inadequate diets, and food restrictive programs, proper balance is rarely achieved and supplementation is advisable. Especially during illness, trauma, surgery and stress more amino acids are required than can be obtained by food alone. In the chronically ill, they can help reverse negative nitrogen balance, and help prevent tissue wasting. ALL-BASIC-PLUS is the recommended choice to help insure optimum balance and provide basic amino acid requirements.

BENEFITS OF MONTIFF'S ALL-BASIC-PLUS

- Highest quality L-Crystalline singular amino acids readily available for proper utilization and metabolism. Contains all essential amino acids for proper protein synthesis by organic tissues.
- L-LYSINE HCL, which is low in vegetarian diets, may inhibit viruses such as Herpes and EBV, and is found in muscle and connective tissue.
- ALL-BASIC PLUS formula has proper Lysine to Arginine balance.
- L-TRYPTOPHAN, Essential amino acid related to stress reduction, vegetarian diets, and aids in proper mental function. Considered useful in dementia.
- L-ARGININE BASE for immune function and cardiovascular properties. It helps increase Nitric Oxide production which is important for endothelial cells.
- L-LEUCINE, L-ISOLEUCINE & L-VALINE, make up the Branched Chain Essential Amino Acids in proper balance for healthy muscle tissue. Believed to be important for stamina, endurance and strength. These amino acids are lost during catabolic conditions, i.e. cancer, burns and surgery and other wasting conditions.
- L-ALANINE helps stabilize blood glucose levels.
- L-THREONINE, Essential amino acid. Precursor to Glycine. Found useful in certain neurological disorders.
- L-HISTIDINE, A semi-essential amino acid. Found useful in certain conditions of Rheumatoid Arthritis and as a dietary supplement.
- L-METHIONINE prevents deposits and cohesion of fats in the liver due to lipotropic factors, and assists in proper gallbladder function. It also has powerful antioxidant properties.

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

- L-CYSTEINE promotes recovery of tissue, is part of the insulin molecule, and is useful in dermatology problems such as psoriasis and eczema.
- L-GLUTAMINE for muscle tissue, neurological and gastro-intestinal health, supporting the immune system and promoting proper glucogenic function.
- L-TYROSINE, which crosses the blood brain barrier quickly, to elevate catecholamines (which are generally low in depression), and for proper neurological balance.
- L-ASPARTIC ACID helps in protective function and detoxification of the liver.
- L-GLUTAMIC ACID important for neurological health and is precursor to GABA.
- L-PHENYLALANINE is the precursor for epinephrine and catecholamine chemistry, and has been found useful in conditions of lethargy and extreme mental fatigue.
- GLYCINE is important for proper glucose balance, formation of collagen, synthesis of creatine, prostate health and is involved in the central nervous system. It is essential for bile acid metabolism and is a biochemical constituent of the tripeptide Glutathione, which is an important antioxidant
- L-SERINE, An essential or semi-essential amino acid in various health conditions.
- N-ACETYL-L-CYSTEINE is a major amino acid complex that is the precursor to Glutathione and helps fight toxic compound build-up in the body.
